

# Open for Business

The Symphony Software Foundation is an independent, non-profit organization of global financial services and fintech leaders. We promote an open source ecosystem around the Symphony platform to foster disruptive innovation, collaboration and workflow productivity.

*Open is tearing down the walls of dysfunctional collaboration*

## Galvanizing the open source movement

Increased pressure to innovate at a faster pace, and the emerging competition from fintech firms, are causing financial services firms to realize the benefits of contributing to the open source movement and collaborating with industry peers.

The Foundation hosts open source development of the Symphony platform, bots, apps and integrations on the Symphony platform, and open source technologies common to the financial services industry.

 Community-driven innovation	 Security through transparency
 Superior integration capabilities	 Reduced development costs

We believe in providing the best experience for the developer by offering API access and developer tools. By automating enforcement of the highest standards of security, quality and IP cleanliness, we ensure that enterprise-grade code is produced by our community.

### Platinum Members

### Gold Members

## Fueling revolution. Driving innovation.

The successes of the open source development model have shown how open collaboration helps companies to focus on delivering actual competitive differentiators, while commoditizing competitors businesses and maximizing interoperability of their development, through contribution to a common open source platform.

The Foundation enables true collaboration between firms, and between firms and their customers, providing a safe environment for open source contributions and a governance model that allows meritocratic representation of all participants.

### Open source

Hosts an ecosystem of open source projects on Github around the Symphony messaging and collaboration platform. Projects are community driven and are licensed under the enterprise-friendly Apache v2 license.

### Open developer platform (New!)

Members and contributors can access Symphony APIs, developer tools and documentation, and an enterprise-grade software lifecycle that ensures high quality, security and IP cleanliness of its project releases.

### Open innovation

Fosters open innovation and open standards development between member organizations through transparent working groups.

### Open governance

Implements an open, inclusive and meritocratic governance model for each of its governing entities, which include a board of directors, engineering steering committee, working group and a project team.
